The Quantified Process Approach to Neuropsychological Assessment (Studies on Neuropsychology, Neurology and Cognition) From Psychology Press

Since the late 1800s psychologists have been interested in discerning the strategies subjects employ to solve psychological tests (Piaget, 1928, Werner, 1940, Gesell, 1941). Much of this work, however, has relied on qualitative observations. In the 1970s, Edith Kaplan adopted this approach to the analysis of standardized neuropsychological measures. Unlike her predecessors, Dr. Kaplan and her colleagues emphasized the application of modern behavioral neurology to the analysis of the test data. Her approach was later termed the Boston Process Approach to neuropsychological assessment.

While Edith Kaplan's work generates a great deal of enthusiasm, the qualitative nature of her analyses did not allow for its adoption by mainstream neuropsychologists. However, in recent years this limitation has begun to be addressed. Clinicians and researchers have developed new methodologies for quantifying the Boston Process Approach, leading to the emergence of a new field, which is collectively termed the Quantified Process Approach.

Quantified Process Approach to Neuropsychological Assessment outlines the rationale for the emergence of this new approach and reviews the state of the art research literature and up to date clinical applications as they pertain to the evaluation of neuropsychiatric, head injured, and learning disabled patients. When available, norms and scoring forms are included in the appendices.

Editorial Review

Review

'This book is a valuable resource for clinicians and researchers in the field of neuropsychology. It provides information that will help to transform the process approach from an observational method to an empirically validated methodology. It gives new meaning to the distinction between 'quantitative' and 'qualitative' techniques for evaluating brain-behavior relationships.' - William B. Barr, Chief of Neuropsychology, Comprehensive Epilepsy Center, New York University School of Medicine

Users Review

From reader reviews:

Alvin Pryor:

Why don't make it to become your habit? Right now, try to ready your time to do the important take action, like looking for your favorite publication and reading a book. Beside you can solve your long lasting problem; you can add your knowledge by the publication entitled The Quantified Process Approach to Neuropsychological Assessment (Studies on Neuropsychology, Neurology and Cognition). Try to face the book The Quantified Process Approach to Neuropsychological Assessment (Studies on Neuropsychology, Neurology and Cognition) as your good friend. It means that it can being your friend when you feel alone and beside that of course make you smarter than in the past. Yeah, it is very fortunated for yourself. The book makes you a lot more confidence because you can know anything by the book. So , we need to make new experience as well as knowledge with this book.

Sarah Frigo:

The book The Quantified Process Approach to Neuropsychological Assessment (Studies on Neuropsychology, Neurology and Cognition) can give more knowledge and information about everything you want. So just why must we leave a very important thing like a book The Quantified Process Approach to Neuropsychological Assessment (Studies on Neuropsychology, Neurology and Cognition)? A number of you have a different opinion about publication. But one aim which book can give many info for us. It is absolutely suitable. Right now, try to closer along with your book. Knowledge or info that you take for that, it is possible to give for each other; you can share all of these. Book The Quantified Process Approach to Neuropsychological Assessment (Studies on Neuropsychology, Neurology and Cognition) has simple shape however you know: it has great and big function for you. You can appearance the enormous world by wide open and read a guide. So it is very wonderful.

Ricardo Bishop:

In this period globalization it is important to someone to receive information. The information will make a professional understand the condition of the world.
