**Multimedia Networks: Protocols, Design and Applications** By Hans W. Barz, Gregory A. Bassett

The transportation of multimedia over the network requires timely and errorless transmission much more strictly than other data. This had led to special protocols and to special treatment in multimedia applications (telephony, IP-TV, streaming) to overcome network issues. This book begins with an overview of the vast market combined with the user's expectations. The base mechanisms of the audio/video coding (H.26x etc.) are explained to understand characteristics of the generated network traffic. Further chapters treat common specialized underlying IP network functions which cope with multimedia data in conjunction which special time adaption measures. Based on those standard functions these chapters can treat uniformly SIP, H.248, High-End IP-TV, Webcast, Signage etc. A special section is devoted to home networks which challenge high-end service delivery due to possibly unreliable management. The whole book treats concepts described in accessible IP-based standards and which are implemented broadly. The book is aimed at graduate students/practitioners with good basic knowledge in computer networking. It provides the reader with all concepts of currently used IP technologies of how to deliver multimedia efficiently to the end user.

### Editorial Review

#### Users Review

##### From reader reviews:

##### **Rebecca Clark:**

In this 21st one hundred year, people become competitive in every way. By being competitive at this point, people have do something to make these individuals survives, being in the middle of the particular crowded place and notice through surrounding. One thing that often many people have underestimated the idea for a while is reading. Sure, by reading a book your ability to survive raise then having chance to stand than other is high. To suit your needs who want to start reading a book, we give you this Multimedia Networks: Protocols, Design and Applications book as beginning and daily reading book. Why, because this book is greater than just a book.

##### **Janet Steele:**

Reading a guide can be one of a lot of exercise that everyone in the world loves. Do you like reading book consequently. There are a lot of reasons why people fantastic. First reading a book will give you a lot of new details. When you read a guide you will get new information mainly because book is one of many ways to share the information or perhaps their idea. Second, reading through a book will make you more imaginative. When you examining a book especially fictional works book the author will bring one to imagine the story how the character types do it anything. Third, you may share your knowledge to other individuals. When you read this Multimedia Networks: Protocols, Design and Applications, you can tells your family, friends as well as soon about yours book. Your knowledge can inspire the others, make them reading a book.

##### **Joshua Parsons:**

Beside this Multimedia Networks: Protocols, Design and Applications in your phone, it might give you a way to get more close to the new knowledge or data. The information and the knowledge you are going to got here is fresh from oven so don't become worry if you feel like an previous people live in narrow commune. It is good thing to have Multimedia Networks: Protocols, Design and Applications because this book offers to you personally readable information. Do you at times have book but you rarely get what it's about. Oh come on, that won't happen if you have this in your hand. The Enjoyable option here cannot be questionable, such as treasuring beautiful island. So do you still want to miss this? Find this book in addition to read it from currently!

##### **John Lockett:**

What is your hobby? Have you heard this question when you got learners? We believe that that query was

given by teacher with their students. Many kinds of hobby, Every person has different hobby. And you also know that little person like reading or as looking at become their hobby. You need to understand that reading is very important as well as book as to be the matter. Book is important thing to provide you knowledge, except your own teacher or lecturer. You will find good news or update concerning something by book. Different categories of books that can you go onto be your object. One of them is niagra Multimedia Networks: Protocols, Design and Applications.
