Vehicle Dynamics and Damping: First Revised Edition By Jan Zuijdijk

This book explains the influence of damping on the ride and handling of race and sports cars. The author deals with the myths about damping, explaining the correlation between laws of physics and damping design, showing that there is nothing mysterious about the way dampers work or damping forces can be manipulated. If the tire is the most important part transmitting engine power to the pavement, an integrated damping/suspension system is the second most important component between engine power and road surface. Over the last decades, suspension design and tuning has become one of the most important reasons for success on the race track. One of the most significant achievements of the author has been the realisation that the unsprung mass is a greater disturbing factor for good handling than the sprung mass of a car. The author describes the observations leading to this breakthrough in modern suspension tuning and the excellent results in racing.

Editorial Review

About the Author

Jan Zuijdijk has been active in motorsports as suspension engineer and designer of damping systems for over 45 years, specializing in gas hydraulic damping and vehicle dynamics as applied to race cars in a diversified field. His career started at Koni in Holland in 1960 in Research and development and was soon a regular suspension engineer on the Formula One and international racing series providing set up service to the teams. Jan Zuijdijk together with the late Henk Richten, service manager at Koni Holland, designed and pioneered a new revolutionair damper design of which the damping forces could be adjusted without taking the damper of the car. After the new design damper was tested on the Ferrari prototype sports cars at the Nurburgring, the Formula One teams of Lotus, Tyrrell, Brabham, Surtees and other teams started using the new damper designed by Zuijdijk and Richten. Zuijdijk worked within the research department on a Koni Gas hydraulic Self Leveling Suspension system for the Porsche 911 and Ferrari 365 2+2 especial tuning the ride and handling of the system. The Leveling system using suspension movement to activate the pump action providing lift to carry the variable weight of the car. In 1972, Jan Zuijdijk moved to the United States of America working with the Koni importer in the function of Chief Engineer and became directly involved with the American Racing series of which there are many and diverse series, soon the Zuijdijk prepared Koni dampers dominated the Indy car series. In 1978, Zuijdijk accepted the function of Director of Engineering and Racing services, responsible for product development for the North American and Canadian market, organizing racing service throughout the country at Koni America in Culpeper V.A. In 1988, Zuijdijk resigned from Koni and continued to work as consultant to racing teams in the USA. In 1989, He worked with the Patrick racing team, designing suspension components

From reader reviews:

Christopher Patterson:

Information is provisions for folks to get better life, information currently can get by anyone in everywhere. The information can be a information or any news even a problem. What people must be consider while those information which is inside the former life are difficult to be find than now could be taking seriously which one is appropriate to believe or which one typically the resource are convinced. If you have the unstable resource then you understand it as your main information you will see huge disadvantage for you. All of those possibilities will not happen with you if you take Vehicle Dynamics and Damping: First Revised Edition as the daily resource information.

Griselda Gonzalez:

Hey guys, do you wants to finds a new book to study? May be the book with the subject Vehicle Dynamics and Damping: First Revised Edition suitable to you? Often the book was written by renowned writer in this era. The particular book untitled Vehicle Dynamics and Damping: First Revised Edition is one of several books in which everyone read now. That book was inspired a number of people in the world. When you read this e-book you will enter the new dimension that you ever know prior to. The author explained their plan in the simple way, therefore all of people can easily to be aware of the core of this guide. This book will give

you a lot of information about this world now. In order to see the represented of the world in this particular book.

Patrick Austin:

Spent a free a chance to be fun activity to try and do! A lot of people spent their down time with their family, or their very own friends. Usually they carrying out activity like watching television, gonna beach, or picnic from the park. They actually doing same every week. Do you feel it? Do you need to something different to fill your free time/ holiday? Could be reading a book might be option to fill your no cost time/ holiday. The first thing you ask may be what kinds of e-book that you should read. If you want to try look for book, may be the e-book untitled Vehicle Dynamics and Damping: First Revised Edition can be good book to read. May be it may be best activity to you.

David Furtado:

In this period of time globalization it is important to someone to receive information. The information will make professionals understand the condition of the world. The fitness of the world makes the information much easier to share. You can find a lot of referrals to get information example: internet, newspaper, book, and soon. You can view that now, a lot of publisher that will print many kinds of book. The particular book that recommended to your account is Vehicle Dynamics and Damping: First Revised Edition this guide consist a lot of the information of the condition of this world now. This specific book was represented how does the world has grown up. The language styles that writer use to explain it is easy to understand. The writer made some analysis when he makes this book. This is why this book ideal all of you.
