

Ordinary and Partial Differential Equations: Third Year College Course For Mathematicians, Physicists, and Engineers

By Mohamed F. El-Hewie

Ordinary and Partial Differential Equations: Third Year College Course For Mathematicians, Physicists, and Engineers By Mohamed F. El-Hewie

This book comprises a course in differential equations, which students of engineering, physics, and mathematics complete as a requirement of bachelor in science degree. The reader must possess basic skills in calculus, since all elementary differentiations and integrations in this book assume that the student could visually spot the derivation from previous years in high school or college. The book is organized in the logical fashion as presented to college students. The ordinary differential equations (o.d.e.) are first studied in great details, since partial differential equations (p.d.e.) must be rendered ordinary by separation of variables so as yield meaningful solution. When separation of variables is untenable (such as in nonlinear partial differential equations), then referrals to numerical solutions are given. Within the scope of o.d.e., first- and second-order differential equations are discussed in details, also since equations of higher orders could be reduced in order by successive methods of substitutions, discussed in the book. Also, within the scope of o.d.e., equations with constant coefficients are dealt with greater details, since variable coefficients could be rendered constants by interim substitutions and reverse substations. Also, dealt with is the reduction of higher degrees of variables to lesser degrees. The following is a brief outline of the topics discussed in the book: Separable exact o.d.e o Homogeneous first-order o.d.e. o Homogenizing first-order o.d.e. with quadratic polynomial o Condition for a total derivative o Solving first-order o.d.e. by integrating factor o Solving first-order o.d.e. by product of two arbitrary functions $g(x)f(x)$ o Solving first-order o.d.e. of higher degree by reduction of degree followed by using product of two arbitrary functions $g(x)f(x)$ o Solving first-order o.d.e. of 2nd-degree by means of quadratic roots. o Solving first-order o.d.e. of 2nd-degree by substitutive reduction to 1st-degree o Parametric integration of first-order o.d.e. of 2nd-degree to express y in terms of powers in y' . o General solution of Clairaut's equation. o General solution of Lagrange's equation. o Orthogonal curves of fluid flow. o Orthogonal projection of curves. o Isogonal projection of curves. o Solution of second-order o.d.e. by reducing it to first-order o Solution of second-order o.d.e. and higher degree by reducing it to first-order. o Conditions required for general solution of homogeneous o.d.e. o Reducing order of o.d.e. when a particular solution is know. o Characteristic equations and solution of 2nd-order o.d.e. by D-Operator. o Characteristic equations and solution of 2nd-order o.d.e. with complex roots. o General and

particular solutions of the non-homogenous 2nd-order o.d.e. o Integrating 4th-order nonhomogeneous o.d.e. with sine function by using the Inverse D-Operator. o Simultaneous solution of 1st-order o.d.e. o Simultaneous solution of 2nd-order o.d.e. o Order reduction of 3rd-order nonhomogeneous o.d.e. by known particular solution o Solving 2nd-order o.d.e by product of two arbitrary functions $g(x)f(x)$. o Solution of 2nd-order nonhomogenous o.d.e. by the method of variable parameters o Solution by the method of change of the independent variable x o Solution of 2nd-order o.d.e. by power series. o Solution of 2nd-order o.d.e. by power series by Frobenius's method. o Airy-Lévy's equation o Elastic Vibration o Heat Equation o Laplace Equation o Wave Equation o Free oscillation or homogeneous o.d.e. o Forced oscillation or nonhomogeneous o.d.e. o Euler's elastic bending problem. o Whirling of elastic rod. o Transverse wave transmission in a vertical elastic body. o Propagation of sound waves in gas medium. o Flow of electricity in wire. o Telegraph Equations: o Radio Equations o Heat conducting plate with rectangular cross-section. o One dimensional variable heat conduction o One dimensional variable heat conduction with nonvanishing final temperature.

Editorial Review

Users Review

From reader reviews:

Martha Howell:

Information is provisions for anyone to get better life, information currently can get by anyone in everywhere. The information can be a information or any news even a problem. What people must be consider whenever those information which is in the former life are difficult to be find than now's taking seriously which one is suitable to believe or which one the actual resource are convinced. If you obtain the unstable resource then you buy it as your main information you will have huge disadvantage for you. All those possibilities will not happen in you if you take Ordinary and Partial Differential Equations: Third Year College Course For Mathematicians, Physicists, and Engineers as the daily resource information.

Lillian Thrasher:

Spent a free the perfect time to be fun activity to try and do! A lot of people spent their sparetime with their family, or all their friends. Usually they carrying out activity like watching television, about to beach, or picnic within the park. They actually doing same thing every week. Do you feel it? Will you something different to fill your own personal free time/ holiday? Could possibly be reading a book may be option to fill your free time/ holiday. The first thing that you will ask may be what kinds of guide that you should read. If you want to consider look for book, may be the e-book untitled Ordinary and Partial Differential Equations: Third Year College Course For Mathematicians, Physicists, and Engineers can be excellent book to read. May be it can be best activity to you.

Kent Brown:

Playing with family within a park, coming to see the ocean world or hanging out with close friends is thing that usually you might have done when you have spare time, after that why you don't try issue that really opposite from that. 1 activity that make you not sensation tired but still relaxing, trilling like on roller coaster you have been ride on and with addition info. Even you love Ordinary and Partial Differential Equations: Third Year College Course For Mathematicians, Physicists, and Engineers, it is possible to enjoy both. It is great combination right, you still desire to miss it? What kind of hang-out type is it? Oh seriously its mind hangout folks. What? Still don't buy it, oh come on its referred to as reading friends.

Marcella Baird:

Some individuals said that they feel fed up when they reading a guide. They are directly felt the idea when they get a half areas of the book. You can choose often the book Ordinary and Partial Differential Equations:

Third Year College Course For Mathematicians, Physicists, and Engineers to make your reading is interesting. Your skill of reading ability is developing when you such as reading. Try to choose basic book to make you enjoy to read it and mingle the opinion about book and studying especially. It is to be very first opinion for you to like to open a book and examine it. Beside that the guide Ordinary and Partial Differential Equations: Third Year College Course For Mathematicians, Physicists, and Engineers can to be your friend when you're sense alone and confuse with what must you're doing of their time.
