Least Squares Data Fitting with Applications By Per Christian Hansen, Víctor Pereyra, Godela Scherer

As one of the classical statistical regression techniques, and often the first to be taught to new students, least squares fitting can be a very effective tool in data analysis. Given measured data, we establish a relationship between independent and dependent variables so that we can use the data predictively. The main concern of *Least Squares Data Fitting with Applications* is how to do this on a computer with efficient and robust computational methods for linear and nonlinear relationships. The presentation also establishes a link between the statistical setting and the computational issues.

In a number of applications, the accuracy and efficiency of the least squares fit is central, and Per Christian Hansen, Víctor Pereyra, and Godela Scherer survey modern computational methods and illustrate them in fields ranging from engineering and environmental sciences to geophysics. Anyone working with problems of linear and nonlinear least squares fitting will find this book invaluable as a hands-on guide, with accessible text and carefully explained problems.

Included are• an overview of computational methods together with their properties and advantages• topics from statistical regression analysis that help readers to understand and evaluate the computed solutions• many examples that illustrate the techniques and algorithms

Least Squares Data Fitting with Applications can be used as a textbook for advanced undergraduate or graduate courses and professionals in the sciences and in engineering.

Editorial Review

Review

Least squares remains a key topic in scientific computing, serving as a vital bridge between data and models. This book describes many interesting aspects of this problem class, including its statistical foundations, algorithms for solving both linear and nonlinear models, and its applications to many disciplines. The authors convey both the rich history of the subject and its ongoing importance.

(Stephen Wright, University of Wisconsin–Madison)

Least Square Data fitting with Applications is a book that will be of great practical use to anyone whose work involves the analysis of data and its modeling. It offers a great deal of information that can be a valuable in the lecture theater as in the lab or office.

(*Mathematics Today*)

About the Author

Per Christian Hansen is a professor of scientific computing at the Technical University of Denmark. **Víctor Pereyra** is a consulting professor of energy resources engineering at Stanford University and was a principal at Weidlinger Associates, Los Altos, California. **Godela Scherer** is a visiting research fellow in the Department of Mathematics at the University of Reading, United Kingdom, and a professor of scientific computing at the Universidad Simón Bolívar, Venezuela.

Users Review

From reader reviews:

Jeffrey Smith:

What do you in relation to book? It is not important together with you? Or just adding material when you really need something to explain what your own problem? How about your extra time? Or are you busy particular person? If you don't have spare time to accomplish others business, it is make one feel bored faster. And you have time? What did you do? Everybody has many questions above. The doctor has to answer that question due to the fact just their can do that. It said that about book. Book is familiar in each person. Yes, it is appropriate. Because start from on kindergarten until university need this Least Squares Data Fitting with Applications to read.

John Silverstein:

Do you certainly one of people who can't read satisfying if the sentence chained inside the straightway, hold on guys this particular aren't like that. This Least Squares Data Fitting with Applications book is readable by simply you who hate those straight word style. You will find the facts here are arrange for enjoyable

studying experience without leaving even decrease the knowledge that want to provide to you. The writer associated with Least Squares Data Fitting with Applications content conveys thinking easily to understand by lots of people. The printed and e-book are not different in the articles but it just different in the form of it. So , do you nevertheless thinking Least Squares Data Fitting with Applications is not loveable to be your top listing reading book?

Josephine Mares:

Reading a e-book can be one of a lot of action that everyone in the world really likes. Do you like reading book so. There are a lot of reasons why people enjoy it. First reading a book will give you a lot of new information. When you read a e-book you will get new information due to the fact book is one of a number of ways to share the information or maybe their idea. Second, reading through a book will make a person more imaginative. When you examining a book especially hype book the author will bring one to imagine the story how the people do it anything. Third, you may share your knowledge to others. When you read this Least Squares Data Fitting with Applications, you could tells your family, friends in addition to soon about yours publication. Your knowledge can inspire others, make them reading a publication.

Darlene Beaudoin:

Beside this specific Least Squares Data Fitting with Applications in your phone, it could give you a way to get closer to the new knowledge or info. The information and the knowledge you will got here is fresh from the oven so don't possibly be worry if you feel like an aged people live in narrow town. It is good thing to have Least Squares Data Fitting with Applications because this book offers for you readable information. Do you occasionally have book but you don't get what it's facts concerning. Oh come on, that will not end up to happen if you have this with your hand. The Enjoyable arrangement here cannot be questionable, like treasuring beautiful island. Use you still want to miss the idea? Find this book in addition to read it from now!
