A Laboratory Course in Nanoscience and Nanotechnology By Gerrard Eddy Jai Poinern

Although there are many theoretical nanotechnology and nanoscience textbooks available to students, there are relatively few practical laboratory-based books. Filling this need, **A Laboratory Course in Nanoscience and Nanotechnology** presents a hands-on approach to key synthesis techniques and processes currently used in nanotechnology and nanoscience. Written by a pioneer in nanotechnology, this practical manual shows undergraduate students how to synthesize their own nanometer-scale materials and structures and then analyze their results using advanced characterization techniques.

Through a series of well-designed, classroom-tested lab experiments, students directly experience some of the magic of the nano world. The lab exercises give students hands-on skills to complement their theoretical studies. Moreover, the material in the book underscores the truly interdisciplinary nature of nanoscience, preparing students from physics, chemistry, engineering, and biology for work in nanoscience- and nanotechnology-related industries.

After introducing examples of nanometer-scale materials and structures found in nature, the book presents a range of nanometer-scale materials and the synthesis processes used to produce them. It then covers advanced characterization techniques for examining nanometer-scale materials and structures. It also addresses lab safety and the identification of potential hazards in the lab before explaining how to prepare a scientific report and present research results. In addition, the author discusses typical projects undertaken in nanotechnology labs, such as the analysis of samples using scanning electron microscopy and atomic force microscopy. The book concludes with a set of projects that students can do while collaborating with a mentor or supervisor.

Editorial Review

Review

"... provides a unique opportunity for students as well as professionals in academia and industry to learn how to synthesize nanomaterials. Clear and concise directions along with characterization methods provide the reader with a hands-on introduction to the world of nanomaterials. ... This is a great way to learn about many of the modern methods for nanomaterial preparation on a small scale."

?John J. Shea, *IEEE Electrical Insulation Magazine*, November/December 2015

"... with proper classroom guidance, the experiments described here, coupled with anecdotal examples the author provides on the utility of nanoparticles, could serve as a good basis for a full laboratory course."

?*MRS Bulletin*, Vol. 40, September 2015

"The laboratory manual is an excellent and timely addition to the resources available to teach undergraduate and postgraduate students working in the nanosciences. Written by an internationally recognized expert in the field, the material is well presented, making nanotechnology accessible to students from a wide range of backgrounds. The scope covers nano-related topics in physics, chemistry, biology, and materials science and includes underlying theory as well as many hands-on experiments that have all been well tested and refined over the years this course was taught by the author. The experiments are underpinned by comprehensive descriptions of nanomaterials and the very important techniques of sample characterization that reveal the full nature of the nano world. The presentation is visually attractive, with excellent illustrations. ... This book is destined to become a much-loved and well-used classic."

?From the Foreword by Professor Gordon M. Parkinson, Curtin University

About the Author

Gerrard Eddy Jai Poinern is the director of the Murdoch Applied Nanotechnology Research Group and a senior lecturer in physics and nanotechnology at Murdoch University. His research interests include nanotechnology-based applications for environmental remediation, food security, biomimicry, photothermal and photovoltaics applications, and carbon technologies. He has been a recipient of the Bill and Melinda Gates Foundation Global Grand Challenge in Health Innovation Award for his work on the development of biosynthetic materials and their application in the manufacture of biomedical devices. He received a PhD in physics from Murdoch University.

Users Review

From reader reviews:

Thomas Melendez:

As people who live in the modern era should be up-date about what going on or info even knowledge to make these people keep up with the era that is always change and progress. Some of you maybe can update themselves by examining books. It is a good choice for you but the problems coming to a person is you don't know what type you should start with. This A Laboratory Course in Nanoscience and Nanotechnology is our

recommendation to make you keep up with the world. Why, as this book serves what you want and wish in this era.

Brenda Blackmer:

The guide untitled A Laboratory Course in Nanoscience and Nanotechnology is the reserve that recommended to you to study. You can see the quality of the publication content that will be shown to a person. The language that writer use to explained their way of doing something is easily to understand. The writer was did a lot of research when write the book, and so the information that they share for your requirements is absolutely accurate. You also will get the e-book of A Laboratory Course in Nanoscience and Nanotechnology from the publisher to make you far more enjoy free time.

Tara Scribner:

Playing with family in a park, coming to see the water world or hanging out with friends is thing that usually you could have done when you have spare time, then why you don't try factor that really opposite from that. A single activity that make you not experiencing tired but still relaxing, trilling like on roller coaster you are ride on and with addition details. Even you love A Laboratory Course in Nanoscience and Nanotechnology, you could enjoy both. It is excellent combination right, you still wish to miss it? What kind of hang type is it? Oh seriously its mind hangout people. What? Still don't understand it, oh come on its identified as reading friends.

James Hanson:

Publication is one of source of understanding. We can add our know-how from it. Not only for students and also native or citizen have to have book to know the change information of year to be able to year. As we know those books have many advantages. Beside we add our knowledge, could also bring us to around the world. Through the book A Laboratory Course in Nanoscience and Nanotechnology we can acquire more advantage. Don't you to definitely be creative people? To become creative person must want to read a book. Only choose the best book that suited with your aim. Don't become doubt to change your life at this book A Laboratory Course in Nanoscience and Nanotechnology. You can more pleasing than now.
