## Fundamentals of Spacecraft Attitude Determination and Control (Space Technology Library) By F. Landis Markley, John L. Crassidis

This book explores topics that are central to the field of spacecraft attitude determination and control. The authors provide rigorous theoretical derivations of significant algorithms accompanied by a generous amount of qualitative discussions of the subject matter. The book documents the development of the important concepts and methods in a manner accessible to practicing engineers, graduate-level engineering students and applied mathematicians. It includes detailed examples from actual mission designs to help ease the transition from theory to practice and also provides prototype algorithms that are readily available on the author's website.

Subject matter includes both theoretical derivations and practical implementation of spacecraft attitude determination and control systems. It provides detailed derivations for attitude kinematics and dynamics and provides detailed description of the most widely used attitude parameterization, the quaternion. This title also provides a thorough treatise of attitude dynamics including Jacobian elliptical functions. It is the first known book to provide detailed derivations and explanations of state attitude determination and gives readers real-world examples from actual working spacecraft missions. The subject matter is chosen to fill the void of existing textbooks and treatises, especially in state and dynamics attitude determination. MATLAB code of all examples will be provided through an external website.

### Editorial Review

#### Review

“It is of exceptional quality in both the range of subjects covered and the detail of that coverage. ... this book has a lot to offer to those of us involved in the developments and data processing for such projects, describing in detail external forces as well as the effects of non-rigidity. ... this is a very worthwhile volume, highly recommended for anyone involved in astronomical or other satellite projects.” (Floor van Leeuwen, *The Observatory*, Vol. 135 (1246), June, 2015)

“This is an excellent book. Markley ... and Crassidis (Univ. of Buffalo) have succeeded in creating a work that is a good textbook for both upper-level undergraduate and graduate students as well as practitioners. ... book ends with several appendixes that further support the rest of the book and also provide novice practitioners with a good resource to help them understand the more technical and complicated material. ... Summing Up: Highly recommended. Aerospace engineering collections serving upper-division undergraduates through professionals/practitioners.” (D. B. Spencer, *Choice*, Vol. 52 (7), March, 2015)

#### From the Back Cover

This book explores topics that are central to the field of spacecraft attitude determination and control. The authors provide rigorous theoretical derivations of significant algorithms accompanied by a generous amount of qualitative discussions of the subject matter. The book documents the development of the important concepts and methods in a manner accessible to practicing engineers, graduate-level engineering students and applied mathematicians. It includes detailed examples from actual mission designs to help ease the transition from theory to practice, and also provides prototype algorithms that are readily available on the author's website.

Subject matter includes both theoretical derivations and practical implementation of spacecraft attitude determination and control systems. It provides detailed derivations for attitude kinematics and dynamics, and provides detailed description of the most widely used attitude parameterization, the quaternion. This title also provides a thorough treatise of attitude dynamics including Jacobian elliptical functions. It is the first known book to provide detailed derivations and explanations of state attitude determination, and gives readers real-world examples from actual working spacecraft missions. The subject matter is chosen to fill the void of existing textbooks and treatises, especially in state and dynamics attitude determination. MATLAB code of all examples will be provided through an external website.

#### About the Author

Dr. F. Landis Markley has been a leader in spacecraft attitude estimation as well as one of the most important mission engineers. He joined the Computer Sciences Corporation in 1974 and established himself as an expert on all aspects of spacecraft attitude mission support. He moved to the U. S. Naval Research Laboratory in 1978 and to NASA Goddard Space Flight Center in 1985. Since 2010, he has been Aerospace Engineer Emeritus in Goddard's Attitude Control Systems Engineering Branch. He has supported more than twenty space missions, most notably the Hubble Space Telescope, the Tropical Rainfall Measuring Mission and the Wilkinson Microwave Anisotropy Probe. Dr. Markley is the author of many classic papers in

spacecraft attitude estimation, dynamics, and control. He was one of the principal contributors to the book "Spacecraft Attitude Determination and Control" (Springer, 1978), which has been essential to the education of many astronautical engineers. He was elected Fellow of the AIAA in 1998 and of the AAS in 2007 and has been a Goddard Senior Fellow since 2000. He is a recipient of the NASA Exceptional Service Medal (1994 and 2005), the AIAA Mechanics and Control of Flight Award (1998), and the AAS Dirk Brouwer Award (2005).

Dr. John L. Crassidis is the CUBRC Professor in Space Situational Awareness of Mechanical and Aerospace Engineering at the University of Buffalo (UB). Currently, he is the Director of UB's Center for Multisource Information Fusion. Before joining UB in 2001, he held previous academic appointments at Catholic University of America (1996-1998) and Texas A&M University (1998-2000). He also held a position as a NASA Postdoctoral Research Fellow at Goddard Space Flight Center (1996-1998). While at NASA-Goddard he worked on a number of mission projects, such as the Tropical Rainfall Measurement Mission, the Geostationary Operational Environmental Satellite, and the Wilkinson Microwave Anisotropy Probe. He is first author to the book "Optimal Estimation of Dynamic Systems," which is currently in its second edition. He was elected Fellow of the AAS in 2014 and Associate Fellow of the AIAA in 2002. He is a recipient of the AIAA Mechanics and Control of Flight Award (2012) and several teaching awards.

## **Users Review**

### **From reader reviews:**

#### **Sherry Ellis:**

This book untitled Fundamentals of Spacecraft Attitude Determination and Control (Space Technology Library) to be one of several books that best seller in this year, here is because when you read this reserve you can get a lot of benefit upon it. You will easily to buy that book in the book retailer or you can order it by means of online. The publisher on this book sells the e-book too. It makes you more readily to read this book, as you can read this book in your Smartphone. So there is no reason to you personally to past this publication from your list.

#### **Ricky Dotson:**

Reading a book to get new life style in this yr; every people loves to learn a book. When you go through a book you can get a lots of benefit. When you read books, you can improve your knowledge, mainly because book has a lot of information onto it. The information that you will get depend on what types of book that you have read. If you would like get information about your analysis, you can read education books, but if you act like you want to entertain yourself you are able to a fiction books, this sort of us novel, comics, in addition to soon. The Fundamentals of Spacecraft Attitude Determination and Control (Space Technology Library) will give you new experience in examining a book.

#### **Clifford Caldwell:**

In this period of time globalization it is important to someone to receive information. The information will make professionals understand the condition of the world. The healthiness of the world makes the information easier to share. You can find a lot of personal references to get information example: internet,

paper, book, and soon. You will see that now, a lot of publisher that print many kinds of book. Typically the book that recommended for you is Fundamentals of Spacecraft Attitude Determination and Control (Space Technology Library) this reserve consist a lot of the information in the condition of this world now. This kind of book was represented how can the world has grown up. The language styles that writer make usage of to explain it is easy to understand. Often the writer made some study when he makes this book. That is why this book ideal all of you.

**James Fitzpatrick:**

A number of people said that they feel bored when they reading a guide. They are directly felt the item when they get a half regions of the book. You can choose the particular book Fundamentals of Spacecraft Attitude Determination and Control (Space Technology Library) to make your own personal reading is interesting. Your own personal skill of reading skill is developing when you like reading. Try to choose simple book to make you enjoy to study it and mingle the feeling about book and studying especially. It is to be first opinion for you to like to open a book and learn it. Beside that the reserve Fundamentals of Spacecraft Attitude Determination and Control (Space Technology Library) can to be your brand new friend when you're feel alone and confuse with the information must you're doing of that time.
