## Methods for the Quantitative Assessment of Channel Processes in Torrents (Steep Streams) (IAHR Monographs) By Dieter Rickenmann

An important part of the risk management of natural hazards in mountain regions concerns the hazard assessment and the planning of protection measures in steep headwater catchments, i.e. torrent control and slope stabilization. Torrent processes in steep channels have their rightful place among the various alpine natural hazards and the corresponding control measures have a long tradition in the European alpine countries. In the planning and execution of such measures, professional experience has been of paramount importance. This experience was based primarily on observations made during and after hazardous events, as well as on regular field visits in the catchments of a steep headwater stream. Quantitative measurements, e.g. of the discharge and of the eroded and deposited solid materials, have been increasingly carried out only in the last decades. This set the basis to develop and improve quantitative methods to predict flow hydraulics, bedload transport and debris flows in torrent catchments.

This publication presents an overview of methods to quantify channel processes in steep catchments. The understanding and the quantitative description of channel processes provides an essential basis for the planning of protection measures.

### **Editorial Review**

### **Users Review**

#### **From reader reviews:**

#### **Robert Stratton:**

The book *Methods for the Quantitative Assessment of Channel Processes in Torrents (Steep Streams) (IAHR Monographs)* gives you the sense of being enjoy for your spare time. You can use to make your capable far more increase. Book can to become your best friend when you getting strain or having big problem using your subject. If you can make examining a book *Methods for the Quantitative Assessment of Channel Processes in Torrents (Steep Streams) (IAHR Monographs)* to be your habit, you can get considerably more advantages, like add your personal capable, increase your knowledge about many or all subjects. It is possible to know everything if you like open up and read a book *Methods for the Quantitative Assessment of Channel Processes in Torrents (Steep Streams) (IAHR Monographs)*. Kinds of book are several. It means that, science reserve or encyclopedia or other people. So , how do you think about this reserve?

#### **Jennifer Oaks:**

What do you about book? It is not important along? Or just adding material if you want something to explain what your own problem? How about your spare time? Or are you busy particular person? If you don't have spare time to perform others business, it is make one feel bored faster. And you have free time? What did you do? Everybody has many questions above. They need to answer that question since just their can do that will. It said that about guide. Book is familiar on every person. Yes, it is right. Because start from on guardería until university need this *Methods for the Quantitative Assessment of Channel Processes in Torrents (Steep Streams) (IAHR Monographs)* to read.

#### **David Cain:**

You can find this *Methods for the Quantitative Assessment of Channel Processes in Torrents (Steep Streams) (IAHR Monographs)* by visit the bookstore or Mall. Only viewing or reviewing it may to be your solve issue if you get difficulties for ones knowledge. Kinds of this reserve are various. Not only by written or printed but in addition can you enjoy this book by simply e-book. In the modern era including now, you just looking because of your mobile phone and searching what their problem. Right now, choose your personal ways to get more information about your guide. It is most important to arrange yourself to make your knowledge are still update. Let's try to choose suitable ways for you.

#### **Irving Gaston:**

Do you like reading a guide? Confuse to looking for your favorite book? Or your book had been rare? Why

so many question for the book? But any kind of people feel that they enjoy to get reading. Some people likes studying, not only science book and also novel and Methods for the Quantitative Assessment of Channel Processes in Torrents (Steep Streams) (IAHR Monographs) or even others sources were given expertise for you. After you know how the good a book, you feel want to read more and more. Science publication was created for teacher or perhaps students especially. Those ebooks are helping them to bring their knowledge. In different case, beside science book, any other book likes Methods for the Quantitative Assessment of Channel Processes in Torrents (Steep Streams) (IAHR Monographs) to make your spare time considerably more colorful. Many types of book like here.
